EXECUTIVE ANALYTICS REPORT

Customer Churn & Revenue Intelligence

Financial impact analysis, customer risk profiling, and support escalation correlation across 4,188 subscriber accounts.

Validated Relational Model (4,188 Rows × 22 Columns)

PORTFOLIO PERFORMANCE

Macro KPI Summary

Churn Rate	Monthly Revenue	Revenue Lost	Average Tenure
28.15%	₹70,381	₹19,483	1,752
71.85% Retention Rate	₹16.81 Overall ARPU	27.68% Monthly Leakage	Active & Churned Days

FINANCIAL EROSION

Revenue & Lifetime Value Exposure

MONTHLY RECURRING EXPOSURE

27.68%

₹19,483.21 Monthly Run-Rate Lost

Direct subscription cancellations from ₹70,381.12 total MRR.

CUMULATIVE PORTFOLIO VALUE

₹730,645

CLTV Lost in High-Risk Cohort

Portfolio total CLTV stands at ₹4,465,882 across 4,188 subscribers.

TIER SEGMENTATION

Churn Uniformity Across Plan Tiers

CONTRACT STRUCTURE

Monthly vs. Annual Contract Churn

MONTHLY CONTRACTS

29.30%

Flexible Billing Cycle

Only 2.10% higher attrition than annual subscribers.

ANNUAL CONTRACTS

27.20%

Committed Term Cycle

No severe protection observed over 12-month periods.

RISK STRATIFICATION

Customer Risk Segmentation Matrix

Risk Cohort	Score Range	Customers	Realized Churn	Monthly Revenue	Segment CLTV
High Risk	≥ 75	1,179	100.0%	₹19,483.21	₹730,645
Medium Risk	50 – 74	730	0.0%	₹12,185.70	₹911,936
Low Risk	< 50	2,279	0.0%	₹38,712.21	₹2,823,301

BEHAVIORAL DRIVERS

Support Escalation Correlation

44.67%

Escalation-to-Churn Correlation

Statistical link between unresolved complaints and subscriber exit.

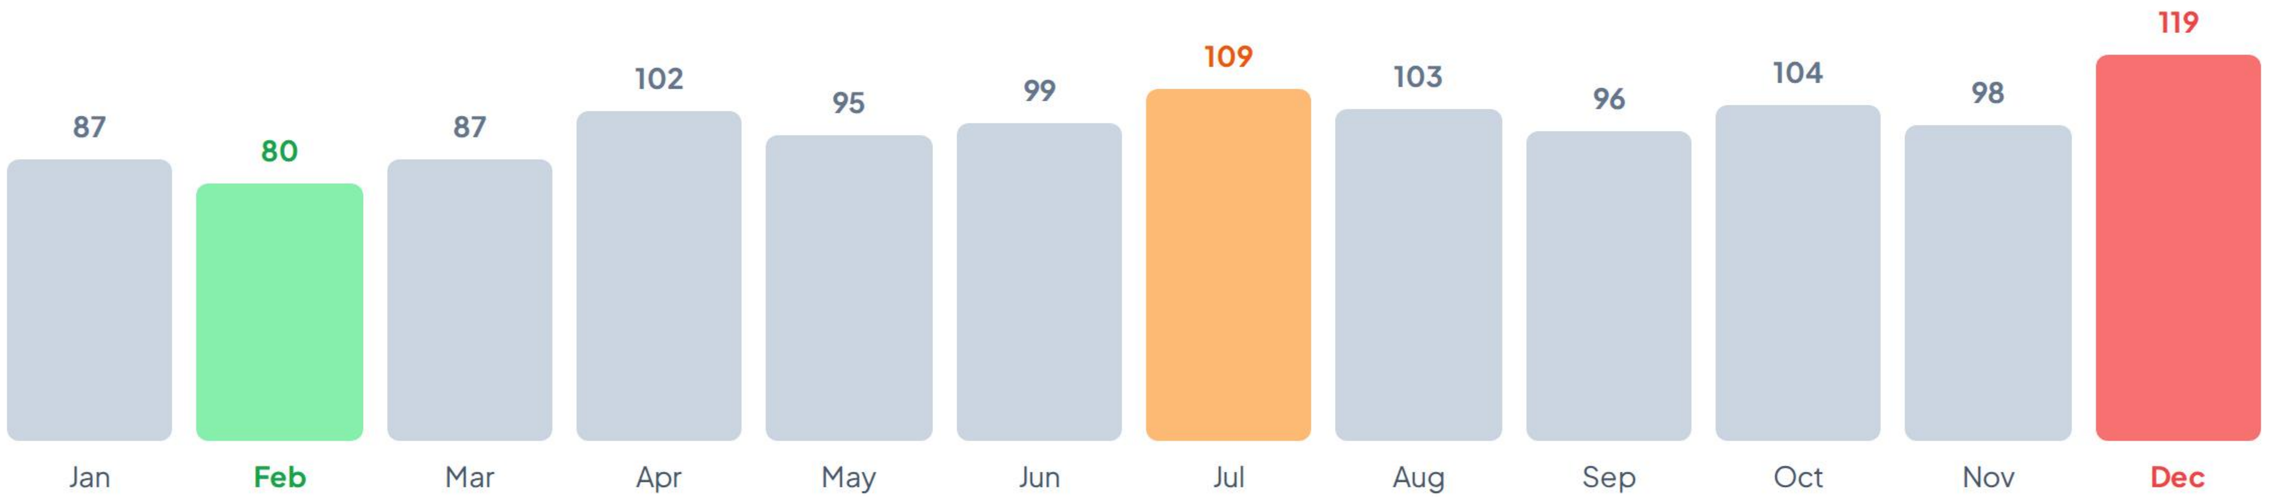

15.64%

Customer Escalation Rate

Proportion of customer support cases escalated to advanced resolution.

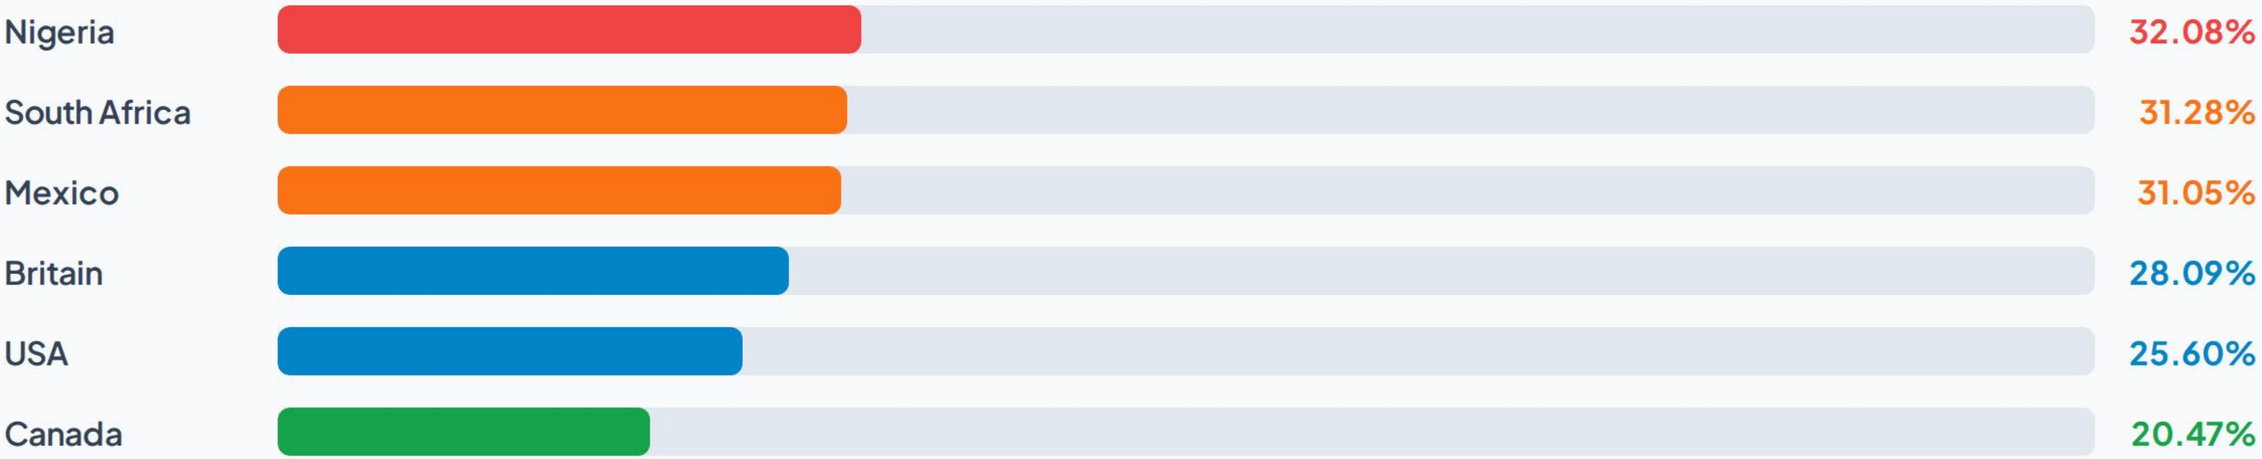

TEMPORAL TREND

Monthly Cancellation Trajectory

REGIONAL DISTRIBUTION

Geographic Churn Comparison

EXPLORATORY DATA ANALYSIS

Key Correlation Matrix Findings

+0.83

Churn Score Correlation

Near-direct linear relationship with cancellation status.

+0.45

Escalation Flag

Strongest operational behavioral indicator of departure.

−0.01

Plan & Contract Type

Near-zero correlation with customer cancellation decisions.

TECHNICAL METHODOLOGY

Data Pipeline & Feature Engineering

PHASE 01

SQL Extraction

Imported customer, subscription, and support tables.

PHASE 02

Deduplication

Aggregated 1,762 complaints into support counts.

PHASE 03

Feature Derivation

Engineered tenure days, cancellation flags, and risk bins.

PHASE 04

Final Consolidation

Joined 4,188 validated records with 22 attributes.

EXECUTIVE SUMMARY

Core Business Takeaways

Service Over Structure: Support escalations exhibit a 44.67% correlation with churn, proving operational service quality outweighs plan or contract type.

High-Risk Precision: All 1,179 high-risk customers churned, fully accounting for the ₹19,483.21 monthly revenue loss and ₹730,645 CLTV erosion.

Seasonal Sensitivity: December marks peak cancellation volume (119+ accounts), establishing a critical window for targeted customer retention efforts.
